

Kappauno Directions & Household use information. Following this guide closely will allow you to understand how the product works and how much you need.

Product Label Directions:

Spray directly on the source of odor. Repeat application as necessary. Amount needed may vary with type and source of odor. If using on fabrics, carpeting or upholstery, test a small hidden area prior to use.

Additional Information- (need more specifics...)

You must *identify the source of the odor* because that is what you want to treat. This is not a perfume! Kappauno is a very effective direct contact means of eliminating odors. When you treat the source of the odor the intent is to remove the odor, not to introduce any new fragrance(s). By design, Kappauno has no significant odor, we thought this would be the best way to prove that it works. Although a light fragrance might be pleasant, it would be difficult to determine if the product worked and we would be just like everyone else. We find that everyone likes different fragrances and most artificially provided fragrances are also unpleasant. We will let you introduce your own fragrance if you so desire and we will deal with the odor.

For best results, cover most of the surface area to be treated. It is better to cover more area with less quantity than to spray it all in one place, (see below for approximate application rates). If the area to be treated is wet, best to drain or dump liquid before treating. If it is not possible to dump or drain liquid, more Kappauno or the introduction of Deo Plus⁺ (the powder product) may be needed to eliminate the odor. It is ok to mix the two as they are made from the same base material. In most cases immediate results are noticeable. For areas that are extremely wet and very obnoxious more product will be needed, (dumpsters/waste barrels that have a substantial build up of matter on the sides and bottom). In these extreme cases Kappauno will eliminate enough or the entire odor problem with repetitive treatments. If the introduction of moisture is not desirable, try using Deo Plus⁺ or if the odor is extreme. In applications where flies exist, the consistent ongoing use of Kappauno will reduce the fly population overtime. In effect, Kappauno is eliminating the source of the odor not just the odor. It is loaded with enzymes that are natural catalysts for breaking down the pathogenic bacteria and elimination of the odor is a result of this process.

Common uses and application rates/methods:

- Shoes/sneaker/boots that smell-2-3 squirts per shoe, or try Deo Plus⁺
- Small piles of manure/waste/litter-spray enough to lightly and evenly coat the surface area
- Trash cans-5-6 squirts on most medium sized cans making sure to hit all horizontal and vertical surfaces of the can, don't forget to spray underneath the inside cover if there is one. Spray the outside of the can if it is real dirty, that may be the source of odor as well.
- Barrels with yard waste- spray evenly covering all of the exposed surface area, use of Deo Plus⁺ may be more effective.
- Automobile and Household Rugs/Carpets - spray enough to lightly and evenly coat the surface area, try Deo Plus if moisture is a concern, 3-4 squirts on a automobile carpet is not a significant amount of water and the smell will more than likely be eliminated.
- Animal/pet urine-spray enough to lightly and evenly coat the surface area, or try Deo Plus⁺
- Skunk smells, Spray the general area, since you can not specifically see how big of an area got hit, it may be more effective to pour Kappauno into a pressurized sprayer to cover more surface area.
- Musty or moldy areas in the basement or garage- try identifying which corner or area of the room is responsible for the odor. If the area is semi-dry or dry use a pressurized sprayer to lightly coat the general area, if you identified the right spot, an immediate knock down of the odor will occur. Repeat as necessary or hit other problematic areas for complete odor removal or use Deo Plus⁺.
- Overall uses-, if you have a source of odor and you can get access to the area enough to coat the surface area that smells you should find immediate results and/or complete elimination of odor.
- Kappauno can be used in pressurized spray equipment as well as mixing sprayers

Caution: Kappauno is all natural, safe to handle and use but as always *keep out of reach of children and use as directed*. In case of contact with eyes flush with water. If swallowed or irritation occurs, seek medical attention. Refer to MSDS sheets available on the website www.terrasolutions.net for more specific information.
